**Purpose of Contact:** Sewer line backfill at B442 (IHSS Group 400-7)

**Discussion** As discussed at the ER Integration meeting on August 12th, during the remediation of the IHSS Group 400-7, Building 442 Laundry (B442L) slab, contamination was encountered within the associated sanitary sewer line. The sewer line was removed to a depth of greater than 6 feet below grade. Approximately 30' of 6" sanitary sewer line that connected B442 to the main sewer line has been sealed at both ends and left in place. The sewer line was removed to more than 6' below grade and to the point where cast iron pipe was joined to a 6" PVC pipe. A sludge sample shows that 4 nanoCuries uranium is present along with elevated metals and semi-volatiles within the cast iron sewer line. No related contamination was found outside the pipe. Because the remaining line is greater than 6 feet below grade and plugged at both ends, the sewer line is not expected to impact surface water or groundwater quality.

It was agreed that the sewer line can be left in place for now and this excavation can be backfilled. However, this section of the sewer line needs to be revisited as part of dispositioning the main sewer system.
